Consultation on Homogenization

How to implement a homogenization process in a NMHS
(Based on WMO-No. 1245 and community expertise)

WMO/SERCOM/SC-CS/ET-DDS

Date: *Day/Month/Year*

WORLD

ORGANIZATION

1950-2025
SCIENCE *for* ACTION

Step 1: Prerequisites

- Efficient governance of observing network & data flow
- Compliance with WMO standards (WMO-No. 8)*
- Respect of GCOS Climate Monitoring Principles
- Knowledge of datasets: metadata, QC, data rescue, Stewardship maturity matrix

* Guide to Instrument and Methods of Observation

SCIENCE for ACTION

Step 2: Define Vision & Objectives

- Aligned with national, regional, and global priorities
- Objectives examples:

  - Contribute to climate change research
  - Provide reliable datasets to researchers
  - Develop products and services
  - Support user sectors (energy, health, agriculture, …)

WORLD METEOROLOGICAL ORGANIZATION

1950-2025
SCIENCE for ACTION

Step 3: Assess Resources

- Human: staff, expertise, training
- Technical: hardware, software, systems
- Financial: national funding, regional/global support

Step 4: Build a Pragmatic Plan

- Define tasks and responsibilities (who, what, teams)

- Identify required tools (hardware/software/stewardship)

- Ensure sustainability: human ressource, security, storage & archiving, update frequency, regional/global data exchange

Key Implementation Tasks

- Homogenize monthly, daily, subdaily, etc.

- Continuously expand dataset length (e.g. data rescue)

- Update homogenized data regularly

- Make available internally, nationally, regionally and globally

SCIENCE for ACTION

Key Message

Homogenization is not a one-off project, It is an ongoing process requiring:

- Governance

- Clear vision

- Resources

- Sustainability planning
