

Climateurope2 advances equitable, quality assured climate services by developing **standardisation procedures** for the European climate services community.

The project identifies **user-driven requirements and criteria for certification**, and uses these insights to propose a **taxonomy of climate services** alongside **community-based good practices and guidelines** - All Deliverables available at <https://zenodo.org/communities/climateurope2/records>

Through **sectoral workshops and stakeholder engagement**, Climateurope2 **contribute directly to EU climate services standardisation efforts**, including work within CEN-CENELEC <https://www.cencenelec.eu/> .

WP2 – Data and processes

Analyses the data and processing components used to generate user-relevant climate information, that is reliable in its quality, interoperability and trustworthiness.

WP2 Deliverables in 2026 produced recommendation based on literature, interviews and case studies across national and international services (IPCC,WMO) EU infrastructures, and private-sector providers.

D2.6: Guidelines of good practices for vocabularies, formats, metadata and technical standards <https://doi.org/10.5281/zenodo.20284107>

D2.7: Provenance and Traceability in Climate Services
<https://doi.org/10.5281/zenodo.20718527>

D2.8: Guidelines for climate uncertainty quantification and communication
<https://doi.org/10.5281/zenodo.21669819>

D2.9: Procedures for data verification, certification and quality management
